

Let's Move Faith and Communities

Toolkit for Faith-Based & Neighborhood Organizations

UNITED STATES DEPARTMENT OF
HEALTH & HUMAN SERVICES

“It’s clear that when it comes to ensuring our children’s health and well-being... when it comes to tackling childhood obesity... our faith-based and community organizations have a critical role to play.”

–Michelle Obama
First Lady of the United States

This toolkit was produced by the White House Office of Faith-Based and Neighborhood Partnerships team, led by the Centers for Faith-Based and Neighborhood Partnerships at the U.S. Department of Health and Human Services, the U.S. Department of Agriculture, the U.S. Department of Education, and the Corporation for National and Community Service, in collaboration with the Office of the First Lady and the Centers for Disease Control and Prevention.

You can find more ideas for supporting **Let's Move!** and download the full version of the *Let's Move Faith and Communities Toolkit for Faith-Based and Neighborhood Organizations* at www.hhs.gov/partnerships/letsmove.

Executive Summary

The ***Let's Move!*** initiative, started by First Lady Michelle Obama, has an ambitious national goal of addressing the challenge of childhood obesity within a generation so that children born today reach a healthy adulthood. ***Let's Move!*** engages every sector impacting the health of children and provides schools, families, and communities with simple tools to help kids be more active, eat better, and get healthy.

Faith-based and neighborhood organizations have a unique and critical role to play in ending childhood obesity and addressing related issues of hunger. Your organizations are trusted leaders in your community, which makes you well-positioned to take action. Children learn many lessons about healthy living and well-being in faith- and community-based settings that set the foundation for their lifestyles as adults.

Let's Move Faith and Communities is designed to help faith-based and neighborhood organizations transform neighborhoods, engage communities, and promote healthy choices. There are a variety of activities and resources provided in this toolkit, so please don't feel as if you need to do all of them. We invite you to explore the menu of options and decide which ones could work best for your organization.

Let's Move Faith and Communities: Participant Challenges

In 2010, First Lady Michelle Obama launched *Let's Move Faith and Communities* with a conference call that included over 4,500 people from around the country. The call featured faith-based and community leaders representing more than 100 national and local faith- and community-based organizations that have committed to getting their communities involved in the challenge to end childhood obesity within a generation.

Please consider joining *Let's Move Faith and Communities* as congregations and organizations around the country get active to meet one or more of these challenges from the First Lady:

CHALLENGES!

- **Walk** a total of three million miles
- **Complete** 500,000 Presidential Active Lifestyle Awards (PALAs) or establish new exercise programs
- **Host 10,000** community gardens, farmers markets, or other fresh food access points
- **Host 1,000** new Summer Food Service Program sites

To learn more and sign up for one or more of the First Lady's challenges, please visit www.hhs.gov/partnerships/letsmove, email partnerships@hhs.gov, or call **202.358.3595**.

FIVE IDEAS TO GET STARTED

Here are five activities to help your organization get moving:

- **Grow a garden:** Open up land at your house of worship or organization to community members who may not have their own space to grow food (*see the step-by-step guide on page 41 for information on how to get started*).
- **Take the President's Challenge:** Help children get physically active by hosting the **President's Challenge** in your organization. To earn a **Presidential Active Lifestyle Award (PALA)**, children must be physically active for five days a week for six weeks! For more information, visit www.presidentschallenge.org (*see the step-by-step guide on page 31 for information on how to get started*).
- **Make community meals healthier:** At community or congregation potlucks or meals, provide healthy options, including fresh fruits and vegetables and whole grains. Use smaller plates at events to encourage smaller portions. Studies show that using smaller plates reduces the amount of food people eat, which is a healthier choice and saves money. For more information on healthy choices and portion size, visit www.ChooseMyPlate.gov.
- **Partner with a school:** Provide community access to your buildings and facilities to operate a **Summer Food Service Program** or afterschool program to ensure that children have access to healthy meals when school is out. For more information on the Summer Food Service Program, visit www.summerfood.usda.gov. For information on creating formal agreements for community access to your buildings and facilities (for any after-hours activities), visit www.jointuse.org.
- **Encourage families in your community to make small, simple changes to their daily lives:** Families can add a side of fruit or veggies to every meal, drink more water and skim milk, go for family walks and get screened for obesity. At their next family checkup, they can ask the doctor to take each child's Body Mass Index. It's an easy way to assess whether kids are at a healthy weight.

Background

To meet the challenge of childhood obesity in America, the First Lady, Michelle Obama, is leading an Administration-wide effort with the bold, ambitious goal of reversing the trend of childhood obesity within a generation. She launched *Let's Move!*, an initiative designed to engage parents, families, teenagers, children, schools, and communities in an effort to promote healthy living and ensure access to affordable and healthy food.

Over one-third of American children are overweight or obese. At the same time, more than 17 million children in the United States did not get enough to eat in 2009. We need your help to reverse these trends. This toolkit is designed to help faith-based and neighborhood organizations engage their communities and promote healthy choices and access to healthy food. Since there is a great deal of variation among faith-based and neighborhood organizations, we included a variety of activities so that every organization or congregation has the opportunity to be part of *Let's Move!*

Let's Move Faith and Communities is designed to support local efforts and highlight accomplishments in communities across the country. We want to work with community leaders, hear about what you're doing in your neighborhoods, and learn from each other through this effort. We're excited to join together as we challenge ourselves to walk three million miles, complete 500,000 Presidential Active Lifestyle Awards (PALAs), host 10,000 community gardens or farmers markets, and host 1,000 new Summer Food Service Program sites at faith-based and neighborhood organizations.

This toolkit provides concrete action steps that an organization can take around four themes:

- **Healthy Choices**
- **Physical Activity**
- **Healthy Schools**
- **Affordable and Accessible Food**

Think of these action steps as a menu of options – you don't have to order the whole menu! Rather, this toolkit provides different steps for you to consider which strategies match up with resources and interests in your community. A web-based version of this toolkit can be found at www.hhs.gov/partnerships/letsmove.

Thank you for all you do in your communities and for being involved in this important initiative. Now, *Let's Move!*

The Need

Obesity has increased rapidly in the United States. Since 1970, the percentage of children who are overweight has more than doubled, and the percentage of overweight adolescents has tripled. Obesity affects children, adolescents, and adults of all ethnicities and income levels.

Childhood obesity impacts health immediately and sets the stage for a number of health problems later in life. Type 2 diabetes is increasingly reported among children and adolescents who are obese.¹ Adults who were obese as children have a higher risk of poor health and may be more likely to develop diabetes and heart disease.² They are often afflicted with poor self-esteem and forced to fight social stigma and discrimination. These conditions can lead to depression and other emotional problems, as well as social isolation, and can prevent children from achieving their full potential.

Furthermore, a poor diet combined with a lack of physical activity can negatively impact student concentration, performance, and motivation to learn. Research shows that there is a direct link between good nutrition and a child's ability to learn, play, grow, and develop. Well-nourished children have higher test scores, better school attendance, and fewer behavioral problems.

At the same time, nearly 17 million or 14.6% of children in the United States live in households that are food insecure. This means that at some point during the year, they simply did not get enough to eat. These households may also lack access to fresh produce, including farmers markets and community gardens. As a result, many children and their families are not only undernourished but malnourished. So, despite facing hunger, many of these children also face the risk of obesity because they lack access to balanced and nutritious diets.

1. "Overweight and Obesity: Additional Health Risks." *Centers for Disease Control and Prevention*. Web. www.cdc.gov/obesity/childhood/consequences.html

2. "Childhood Overweight and Obesity." *Centers for Disease Control and Prevention*. Web. www.cdc.gov/obesity/childhood/index.html

The Opportunity

Leaders in faith communities and neighborhood organizations have a unique and critical role to play in ending childhood obesity and hunger. These organizations are trusted in their communities and can motivate people to take action. The neighborhoods we live in teach us about healthy behavior and shape many of the ways we see health and success.

More than 120 million people in the United States attend religious services regularly, providing opportunities for sharing information and organizing initiatives to combat malnutrition and obesity. Community-based nonprofit and volunteer-driven organizations are also well-positioned to address the challenge of obesity among children and youth.

Trusted leaders and members of faith communities and neighborhood-based organizations can contribute valuable resources, including people, buildings, kitchens, and land, to projects that encourage children and their families to live healthier lifestyles. Leaders and members of congregations and community organizations – people like you – know their communities well and can communicate important health and nutrition information in motivating and effective ways.

Solving the challenge of childhood obesity will take all of us – parents, faith-based and neighborhood organizations, state, local and tribal governments, schools and child care centers, health care facilities and businesses – working together.

Action Items

Faith-based and neighborhood organizations can help create a community of support by initiating, expanding, or coordinating activities described in the following menu of activities. For several of the activities, we have provided step-by-step guides to help you get started.

Remember, you don't have to do everything. Picking one or two activities that make sense for your community or organization, and that you feel you have the capacity to implement, will get you off to a good start. You can then build on success and choose more steps from the menu if you want to expand your efforts.

Before you begin... As a trusted leader in your city or town, you have the potential to create change beyond your congregation or community. Meet with your local decision-makers (e.g., mayor, town administrator, city council or county commission member, parks and recreation director, city planner). Encourage them to sign your municipality up as a Let's Move City, Town or County. Learn more about the lasting policy changes Let's Move Cities, Towns and Counties are making at www.hhs.gov/intergovernmental/letsmove.

Healthy Choices

Healthy Choices

Parents and caregivers play a key role in making healthy choices and shaping lifelong healthy habits. Kids learn about healthy eating from their family and from the food served at home and in their community. Parents and community members can model healthy decisions about physical activity and nutrition. But in today's busy world, figuring out the healthier choices isn't always easy. Parents and caregivers need a community of support. Here are some ways faith-based and neighborhood organizations can provide that support:

- **Make Community Meals Healthier:** Provide healthy selections, including fresh fruits and vegetables and whole grains, at community potlucks or meals. Work to limit portion size by using smaller plates and beverage containers or eliminating buffet-style meals. People do not usually notice differences in portion sizes and unknowingly eat larger amounts when presented with a larger portion. For more information on healthy choices and portion sizes, please visit www.ChooseMyPlate.gov.
- **Motivational Groups:** Challenge members of your community to form motivational groups for those who decide to change food buying patterns or switch to healthier eating habits (*see the step-by-step guide on page 14 for information on how to get started*). See the **Physical Activity** section for some great ideas on how to form similar motivational groups around physical activity.
- **Serve Healthy Drinks and Water:** Always have plenty of water around! For your body to function properly, you must replenish its water supply by consuming beverages and foods that contain water. If you have vending machines in your facility, replace offerings with water, 100% fruit juice, or low-fat or fat-free milk.
- **Community Cookbook:** Create a community or congregational cookbook that features healthy, locally grown seasonal food (*see the step-by-step guide on page 15 for information on how to get started*).
- **Open your Facility:** Provide open access to your organization's facilities, such as large open green spaces, gymnasiums, recreation rooms, fellowship halls, or other meeting spaces. Allow afterschool programs, clubs, or groups to use these spaces to increase youth opportunities for physical activity after school and on weekends. Concerned about the complications of opening your facilities to the community?

Let your kids serve themselves at dinner. Teach them to take small amounts at first. Tell them they can get more if they're still hungry.¹

The U.S. Department of Agriculture's Healthy Eating Index shows that children 2 to 17 years old need to increase their consumption of whole fruit, whole grains, and dark green and orange vegetables and beans because they are consuming less than one-fifth of what they need from these food groups.²

Develop a joint-use agreement to facilitate a partnership between your organization and other nonprofit, private or governmental organizations in your community. This formal agreement can clarify and define shared responsibilities over maintenance, operations, ownership, liability, and cost of your facilities. The following website offers a step-by-step guide on how to develop a joint-use agreement: www.jointuse.org.

- **Teach Healthy Living to Kids:** Utilize youth education curriculum to communicate culturally appropriate health habits connected with the teachings in your community or faith tradition. Curriculum should encourage young people to identify and prepare healthy meals, reduce their consumption of unhealthy foods, and participate in physical activity.
- **Support New Mothers in Your Community:** The majority of women initiate breastfeeding; however, many women indicate barriers to exclusively breastfeed for six months or to continue breastfeeding to one year. Support breastfeeding by establishing a lactation room at your organization or congregation for staff and members, having a breastfeeding friendly child care environment, and offering peer support groups for new moms (*see the step-by-step guide on page 17 for information on how to get started*).
- **Start a Community Supported Agriculture Club:** Partner with local farmers and businesses to sponsor Community Supported Agriculture (CSA) clubs at your place of worship or organization. Subsidize CSA shares for families with limited resources. For an example of a CSA club, visit www.justfood.org/csa.

CHALLENGE!

1. "FNS Core Nutrition Messages," Core Nutrition Messages. Web. www.fns.usda.gov/fns/corenutritionmessages/Files/AllMessages.pdf.

2. "The Quality of Children's Diets in 2003-04 as Measured by the Healthy Eating Index-2005: Nutrition Insight 43," April 2009, USDA/CNPP. Web. www.cnpp.usda.gov/Publications/NutritionInsights/Insight43.pdf.

Infants given breast milk are 22% less likely to be obese than infants given formula.¹

Milk and other calcium-rich foods are key building blocks for strong, healthy bones, but more than 90% of girls and 75% of boys ages 9 to 13 fail to get the recommended 1,300 milligrams of calcium per day.²

Step-by-step guide

Motivational Groups: Challenge members to form motivational groups to focus on changing food buying or eating habits.

Healthy food choices are important for good health and well-being. Eating well means eating a variety of nutrient-rich foods from a variety of food groups and staying within your caloric needs. Providing healthy meals at home is easier when you know what to shop for and understand how to make healthy choices about the food you eat. Members in a motivational group can encourage each other to improve and maintain healthy food shopping strategies. For more information on planning a healthy, balanced diet, you can visit www.ChooseMyPlate.gov.

What are some healthy food shopping tips that my motivational group can use? Grocery stores have thousands of products, with most food items grouped together to make your decision-making easier. Many grocery stores have sections where foods are shelved much like the food groups (e.g., fruits, vegetables, grains, dairy, and protein foods). The U.S. Department of Agriculture's MyPlate recommendations include:

- Enjoy your food, but eat less.
- Avoid oversized portions.
- Make half your plate fruits and vegetables.
- Switch to fat-free or low-fat (1%) milk.
- Make at least half your grains whole grains.
- Compare sodium in foods like soup, bread, and frozen meals. Choose foods with lower numbers.
- Drink water instead of sugary drinks.

1. "Breast Milk Associated With Greater Mental Development in Preterm Infants, Fewer Re-hospitalizations," October 1, 2007, National Institutes of Health (NIH), NIH News. Web. www.nih.gov/news/pr/oct2007/nichd-01.htm.

2. "Milk Matters Calcium Education Campaign" The National Institute of Child Health and Development. Web. www.nichd.nih.gov/milk/prob/critical.cfm.

What resources are available on how to shop for healthy foods that a motivational group could use? The U.S. Food and Drug Administration (FDA) has an interactive website that educates readers about the different parts of a Nutrition Facts Label, such as serving size and calories, on packages of food. For more information, visit www.fda.gov and click on “Food.”

The U.S. Government’s nutrition website has information on shopping, cooking, and meal planning available in both English and Spanish. Please visit the website at www.nutrition.gov for more information or call the National Hunger Hotline at **1.866.348.6479**.

Step-by-step guide

Community Cookbook: Create a congregational or community cookbook that features healthy, locally grown food in season.

Food is a fundamental part of the traditions and cultures that make up a community. In order to support your community in making healthy choices, try creating a community cookbook with your congregation or organization.

What is a community cookbook? A community cookbook is a collection of recipes that reflects the cultures and traditions of a specific group. Recipes are submitted by members of the community and are bound together in one collective volume. Through this sharing, community cookbooks provide members with an abundance of healthy meals at their fingertips.

An NIH study found that maternal smoking during early pregnancy is associated with a greater risk of obesity by age 8.¹

Kids and teens that eat breakfast have more energy, do better in school, and eat healthier throughout the day. So make time for breakfast – for you and your kids!²

1. Chen A, Pennell ML, Klebanoff MA, Rogan WJ, Longnecker MP. IJE Advance Access originally published online on October 31, 2005. Maternal smoking during pregnancy in relation to child overweight: follow-up to age 8 years. *International Journal of Epidemiology*, 2006 35(1) : 121-30.

2. “Childhood Overweight and Obesity Prevention Initiative” Office of the Surgeon General, Department of Health and Human Services. Web. www.surgeongeneral.gov/obesityprevention/parents.html.

Let's Move! Science Facts:

Salt is America's favorite food ingredient. While a small amount of salt is necessary for good health, the amount in the typical American diet is a major cause of high blood pressure (hypertension). Cutting back on salt is a good idea for everybody, even kids.¹

Deep orange and dark green vegetables provide vitamin A, vitamin C, fiber, potassium, and many other nutrients. Whole foods, rather than supplements, are the best source of vitamins and minerals.²

What kinds of guidelines should a healthy community cookbook have?

When selecting recipes for the community cookbook, you should make sure they all focus around a common theme: being healthy! Below are guidelines suggested by the U.S. Department of Agriculture (USDA) for creating healthy standards in any meal. The community cookbook will allow making healthy choices easier and more convenient:

- Emphasize fruits, vegetables, whole grains, and fat-free or low-fat milk and milk products.
- Include lean meats, poultry, fish, beans, eggs, and nuts.
- Make sure the recipe is low in saturated fats, trans fats, cholesterol, salt (sodium), and added sugars. For an example of a heart healthy cookbook that was created with community input, look for “**Recipe Collections**” at www.nhlbi.nih.gov/health.

Here are some great internet resources to help you get started:

- Find a Farmers Market in your state: <http://apps.ams.usda.gov/farmersmarkets>.
- Practice Seasonal Food Safety: www.fsis.usda.gov.
- Learn Great Tips on Food Shopping and Meal Planning: www.nutrition.gov.

Step-by-step guide

Support New Mothers in Your Community: Support continued breastfeeding by providing peer support groups and supportive workplaces, child care centers, and community environments.

Breastfeeding optimally supports infant growth and development and protects mothers' and infants' health. This protection increases with more months of breastfeeding and is strongest when babies receive no foods and fluids other than breast milk for the first six months of life. Studies have found that breastfed babies are less likely to develop ear infections or to be obese later in life than those not breastfed. Support from family, friends, health care workers, employers, and the larger community (e.g., allowing breastfeeding in public and private places, use of mother's breast milk in child care centers) can help mothers meet their breastfeeding goals in today's busy world.

How can we support breastfeeding in our community? There are many ways to support mothers to breastfeed. In addition to providing secure, enclosed, and comfortable areas where mothers can nurse, communities can host breastfeeding peer support groups to help parents overcome barriers to breastfeeding and receive helpful instruction and tips.

How can a community organize breastfeeding peer support groups?

A good way to begin organizing a breastfeeding peer support group is to identify breastfeeding experts in your community who would be willing to lead or present to the group. You can also identify experienced moms who are willing to share their stories with your group. Then you can reach out to Women, Infants, and Children (WIC) clinics and maternity care facilities and advertise the availability of the group. There are two groups of breastfeeding experts who you can engage with your group:

1. "Steps to Healthier US – Prevention Portfolio – Prevention Strategies That Work." Healthier US.gov Home Page. Web. www.healthierus.gov/steps/summit/prevportfolio/strategies/addressing/school/critical.htm.

2. "Helping Your Overweight Child," January 2008, WIN – The Weight-control Information Network, National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK). Web. win.niddk.nih.gov/publications/over_child.htm.

Young people (79%) do not eat the recommended five servings of fruit and vegetables each day. Finding creative ways to encourage fruits and vegetables in your child's diet can be fun for the whole family!¹

Since children grow at different rates at different times, it is not always easy to tell whether a child is overweight. Your health care provider can measure your child's height and weight and tell you whether your child is at a healthy weight and what you can do to help.²

Let's Move! Science Facts:

Kids don't always take to new foods right away. Offer new fruits and veggies many times. Give them a taste at first and be patient with them.¹

Offer your children new foods. Then, let them choose how much to eat. Kids are more likely to enjoy a food when eating it is their own choice. It also helps them learn to be independent.²

Lactation Consultant – This person is a credentialed breastfeeding professional with the highest level of knowledge and skill in breastfeeding support. Many lactation consultants are also nurses, doctors, dietitians, or other kinds of health professionals. Ask your local hospital or birthing center for the name of a lactation consultant who can help develop breastfeeding support programs. For more information, you can visit the “Find a Lactation Consultant” Directory at www.ilca.org or call the International Lactation Consultant Association at **1.888.ILCA.ISU (1.888.452.2478)**.

Breastfeeding Peer Counselor or Educator – A breastfeeding counselor can teach others about the benefits of breastfeeding and can help women with breastfeeding challenges and questions. A “peer” means a person who has breastfed her own baby and is available to help other mothers. You can find a peer counselor with the Special Supplemental Program for Women, Infants, and Children (WIC) by visiting www.fns.usda.gov/wic/contacts/coor.htm or by calling the **National Hunger Hotline at 1.866.348.6479**. Some breastfeeding educators have letters after their names like CLC (Certified Lactation Consultant) or CBE (Certified Breastfeeding Educator).

What resources are available for mothers interested in breastfeeding their child? The U.S. Department of Health and Human Services’ (HHS’) Office on Women’s Health hosts a breastfeeding helpline with trained peer counselors and website to help mothers with common breastfeeding problems and challenges. Breastfeeding Peer Counselors are available to answer emails and assist callers with questions and concerns. These counselors answer questions in English and Spanish, Monday through Friday from 9 a.m. to 6 p.m. Eastern Standard Time (**1.800.994.9662** and **TDD 1.888.220.5446**). Information is available 24 hours a day on the HHS Office on Women’s Health website located at www.womenshealth.gov/breastfeeding. Pregnant and lactating women may also qualify for the Special Supplemental Program

1. “FNS Core Nutrition Messages,” Core Nutrition Messages. Web. www.fns.usda.gov/fns/corenutritionmessages/Files/AllMessages.pdf.

2. “Messages for Preschool Moms,” December 2008, USDA/FNS. Web. www.fns.usda.gov/fns/corenutritionmessages/Files/MomsofPreschoolers_Message.pdf.

for Women, Infants, and Children (WIC) that provides food and nutritional counseling to encourage mothers to breastfeed their children. For more information on WIC, visit www.fns.usda.gov/wic or call **1.866.348.6479**. Additionally, La Leche League International provides access to local breastfeeding support groups, online mother-to-mother support forums, and information on local breastfeeding laws and culture. Visit La Leche League International at www.llli.org.

The HHS Office on Women's Health also has the following breastfeeding resources available:

Your Guide to Breastfeeding:

www.womenshealth.gov/pub/BF.General.pdf

An Easy Guide to Breastfeeding for African American Women:

www.womenshealth.gov/pub/BF.AA.pdf

An Easy Guide to Breastfeeding for American Indian and Alaska Native Families:

www.womenshealth.gov/pub/BF.AI.AN.pdf

The HHS Centers for Disease Control and Prevention invests in breastfeeding as a strategy to improve infant dietary quality and to prevent obesity and other chronic diseases. Information is available at

www.cdc.gov/breastfeeding/resources/guide.htm.

2010 Breastfeeding Report Card

The CDC Breastfeeding Report Card provides state-by-state data so that health professionals, legislators, employers, business owners, community advocates, and family members can work together to protect, promote, and support breastfeeding. The Report Card indicators measure types of support in key community settings as well as the most current data on the breastfeeding goals outlined in *Healthy People 2010*. For more information, visit

www.cdc.gov/breastfeeding/data/reportcard.htm.

Healthy Schools

Healthy Schools

Many children consume at least half of their daily calories at school. Families work to ensure their children eat right and stay physically active at home, but we also need to ensure that children have access to healthy food and opportunities to be physically active in their schools.

Over 95% of young people are enrolled in schools, so the school setting can offer multiple opportunities for students to engage in physical activity, such as physical education classes, recess periods for unstructured play in elementary schools, afterschool programs, intramural sports programs, and physical activity clubs. These opportunities are particularly important because they are accessible to all students, including those with special needs.

With more than 31 million children participating in the National School Lunch Program and more than 11 million participating in the National School Breakfast Program, good nutrition at school is more important than ever. It is our nation's largest feeding program. **Let's Move!** to get healthier food in our nation's schools.

Faith-based and neighborhood organizations can work with schools to help students adopt healthy lifestyles by providing information and practical strategies. Here are some action step suggestions:

- **Partner with a School:** Work with your organization or congregation to partner with a school, Local Education Agency (LEA), or other community-based agency to promote healthy living and physical activities in the school and community.
- **HealthierUS School Challenge:** Identify strategies to support local schools in the HealthierUS School Challenge. The Challenge is a certification program that recognizes schools that take specific steps to improve their school environment by providing physical education classes, serving healthy foods, and teaching children about nutrition. For information on the Challenge, visit www.fns.usda.gov/tn/healthierus/index.html.

CHALLENGE

- **School Salad Bars:** Help your local school install a salad bar in its cafeteria to offer children a healthy alternative for lunch. The *Let's Move Salad Bars to Schools* initiative provides information on the benefits of school salad bars and can assist with fundraising to purchase salad bars. For more information on the initiative, visit www.saladbars2schools.org.
- **School Meal Programs:** Encourage eligible families to enroll their children in school meal programs. Students may be eligible for free or reduced-priced breakfasts and lunches based upon family income levels. Please call the **National Hunger Hotline** at **1.866.348.6479** for more information.
- **Start a Farmers Market:** Work with others in your community to start a farmers market at your facilities or at a local school site (*see the step-by-step guide on page 25 for information on how to get started*).
- **Increase Opportunities for Physical Activity:** Work with local schools to increase opportunities for all students to enjoy physical activity. For more information, visit www.cdc.gov/healthyyouth/keystategies.
- **Child and Adult Care Food Program:** If your organization provides child day care services, or operates afterschool care programs, it may be eligible to receive reimbursement for nutritious meals and snacks served to children who are enrolled for care through the Child and Adult Care Food Program (CACFP). Participating institutions must be licensed or approved to provide day care services. For more information on this program, please visit www.fns.usda.gov/cnd/care or call **1.866.348.6479**.

Let's Move! Science Facts:

The average child drinks at least 20 ounces of soda pop each day. Because each soda on average contains one-third of a cup of sugar, this amounts to drinking 53 pounds of sugar a year!¹

While 90% of schools offer students the opportunity to select a healthful meal, meals that meet all nutrition standards are usually chosen in only 6% to 7% of schools.²

1. "Portion Distortion and Serving Size," We Can!, National Heart, Lung, and Blood Institute. Web. www.nhlbi.nih.gov/health/public/heart/obesity/wecan/eat-right/distortion.htm.
2. "Healthy Meals, Healthy Schools, Healthy Kids," April 2007, USDA School Meals. Web. www.fns.usda.gov/cga/FactSheets/school_meals.pdf.

- **BackPack Program:** Partner with your local food bank to support a Backpack Program to provide children with healthy food options when they are not at school. The Backpack Program gives hungry children food to take home on the weekends or during school vacations. For information on the Backpack Program, please visit www.feedingamerica.org and click on the link to “**Programs & Services**” and “**Network Programs.**”.
- **Walk or Bike to School:** Organize parents to walk or bike with their children to school in walking school buses and rolling bike trains. For more ideas, check out the Safe Routes to School Center at www.saferoutesinfo.org.
- **Healthy Living Club:** Create a healthy living club to facilitate health programming in schools and in the community. Assess healthy eating and physical activity policies, as well as programs that are currently offered, and establish a plan to work towards creating a healthier environment for children (*see the step-by-step guide on page 26 for information on how to get started*).

CHALLENGE!

Step-by-step guide

Farmers Market: Start a farmers market at a local school.

How does an organization create a weekly farmers market for students and parents at a local school? Start by exploring several factors in running the farmers market, such as:

- Identification of potential sites for the market;
- Food sources for the farmers market;
- Duration of the farmers market, including dates and days the market will be open;
- Creation of a staffing plan for the farmers market, including liaisons to the community, school, and farmers;
- Funding sources for the farmers market;
- Other interested congregation or community partners who can collaborate; and
- Creation of an outreach campaign that brings shoppers to the market.

How do we leverage community partnerships for this activity? A great farmers market not only attracts students and parents from the school, but

also other people in the community. Local student organizations can volunteer at the farmers market. If you are in an urban center, you could consider partnering with distributors to bring produce from rural areas.

For more information, USDA provides further valuable advice on how to start a farmers market at www.ams.usda.gov/farmersmarkets. For information on legal and policy considerations related to this and other recommendations, please see the [National Policy and Legal Analysis Network to Prevent Childhood Obesity](http://www.nplanonline.org) at www.nplanonline.org and click on the “[Document Library](#).”

Step-by-step guide

Healthy Living Club: Create a healthy living club or partner with student groups at the school.

How do we get started? Identify all interested students from a local organization or congregation. You can also connect with a student group at the school. We recommend engaging student and/or youth leaders to get their input and ownership.

How can young people get community service credit? You will need to work with your LEA or school system to determine whether students can receive credit for community service activities.

What are some community service projects youth should consider? Be sure to find out what young people want to do, but you can start by providing them with some project ideas. Encourage youth to consider ideas that not only have them being active, but also encourage other young people in the community or at the school to be active. Here are a few activities that could start the brainstorming session with young people:

- **Celebrate Walk to School Month in October.** There are many activities a community can adopt in celebration of our mobility. But don't just move in October! Designate a day once a week or once a month to walk to school or your place of worship: www.walktoschool.org.
- **Partner with other organizations to hold a healthy living week.** Promote the week and hold activities in local places that young people frequent in the community.
- **Hold a recipe contest** and challenge young people to create healthy recipes for traditional meals.
- **Set a physical activity goal** like walking to another state, country, or continent and log the miles walked by members of the community.
- **Offer intramural sports or physical activity clubs** that are accessible to all community members, regardless of skill or ability.

CHALLENGE!

Physical Activity

Physical Activity

Being physically active is just as important to health as eating right. Children need 60 minutes of active play every day to maintain a healthy weight. If this sounds like a lot, consider that eight- to 18-year-olds devote an average of seven-and-a-half hours to using entertainment media including TV, computers, video games, cell phones, and movies in a typical day. Only one-third of high school students get the recommended levels of physical activity.

To increase physical activity, children need physical education, safe routes to walk and ride their bikes to school, parks, and access to playgrounds and community centers. Children need access to sports leagues and dance or fitness programs that are exciting and challenging to keep them engaged. **Let's Move!** to increase opportunities for kids to be physically active, both in school and in communities, and to create new opportunities for families to be physically active together.

In addition to being fun, regular physical activity strengthens bones and muscles, increases self-esteem, and provides many other health benefits. Physical activity, along with eating healthy foods, can help children live healthier lives and perform better in school.

Congregations and neighborhood organizations can help our children get the physical activity they need in many ways. Here are some ideas:

CHALLENGE!

- **Presidential Active Lifestyle Award (PALA):** Help children earn an award by hosting the President's Challenge within your organization (*see the step-by-step guide on page 31 for information on how to get started*). Sign up at www.presidentschallenge.org.
- **Support Community Sports:** Support or start a community sports league, intramural sport or physical activity club that is accessible to all community members, regardless of skill, ability, or financial resources. This is especially critical in locations with no school-supported athletic or physical activity programs.
- **Safe Routes to Walk and Bike in your Communities:** Walk or bike with kids to school, places of worship, and other activities. The National Center for Safe Routes to School provides more information at www.saferoutesinfo.org (*see the step-by-step guide on page 33 for information on how to get started*).

CHALLENGE!

- **Organize Active Events:** Create a physical activity club at your congregation or community center. Organize a walk, dance, bike-a-thon, 5K, field day, fun run, relay race, or come up with your own active event ideas. See this helpful resource: www.fns.usda.gov/tn/Resources/popularevents.pdf.
- **Promote Recreational Facilities:** Partner with local community centers and schools to promote the use of recreation facilities, gymnasiums, playing fields, and playgrounds, especially if your organization lacks these resources. You can develop joint use agreements to facilitate these partnerships. For more information, visit www.jointuse.org.
- **Support or Start a BodyWorks Program in your Community:** BodyWorks is designed to teach active and healthy lifestyle habits to adolescents and families and to help them eat right and achieve 30 to 60 minutes of physical activity per day. For more information on BodyWorks, visit www.womenshealth.gov/BodyWorks or call **202.401.9588**.
- **Participate in a CROP Hunger Walk** to raise awareness about hunger and money for hunger-related causes, both locally and around the world. For more information, please visit www.cropwalk.org or call **1.888.CWS.CROP (1.888.297.2767)**.

CHALLENGE!

Step-by-step guide

PALA: Participate in and encourage members to participate in the Presidential Active Lifestyle Award.

Unfortunately, budget cuts in many school districts have led to the loss of physical education classes and afterschool sports. But faith-based and neighborhood organizations can help to keep our kids healthy and active by engaging members in the Presidential Active Lifestyle Award.

1. "What Causes Overweight and Obesity?" National Heart, Lung, and Blood Institute. Web. www.nhlbi.nih.gov/health/dci/Diseases/obe/obe_causes.html

Let's Move! Science Fact:

Adolescents who participate in physical education at school are more likely to maintain a normal weight as young adults.¹

CHALLENGE!

Let's Move! Science Facts:

Be a role model. Children who see parents enjoying healthy foods and being physically active are more likely to do the same.¹

Balance what you eat with physical activity. Eating healthier foods is important, but we all need to be physically active – at least 60 minutes for kids and 30 minutes for adults – every day or most days of the week.²

What is the Presidential Active Lifestyle Award? The Presidential Active Lifestyle Award (PALA) is part of the President's Challenge. It is a challenge for both children and adults to build healthy habits by committing to regular physical activity five days a week, for six weeks. Everyone can participate and you don't need to be an Olympic athlete. You can walk, bike, run, or garden. As long as children are active 60 minutes a day and adults 30 minutes a day, you are on your way to receiving your award!

Why should a community or faith-based organization encourage participation in the Presidential Active Lifestyle Award? Community groups possess a number of unique resources and characteristics that make them ideal for promoting the PALA. First, faith-based and neighborhood organizations create a social support network for individuals, couples, families, and friends to come together and work toward the common goal of incorporating physical activity into daily life. Second, community groups often have the facilities available to host physical activity programs or events.

What are the steps involved in the President's Challenge? The Presidential Active Lifestyle Award is easy and fun. It consists of only four simple steps and can be tailored to activities that suit the group or individual's needs.

Step One: Choose an activity.

Step Two: Get active.

Step Three: Track your activity.

Step Four: Order your award!

Visit www.presidentschallenge.org for more details about each step.

1. "Parents and Caregivers Checklist." Childhood Obesity Prevention Initiative, Office of the Surgeon General, Department of Health and Human Services. Web. www.surgeongeneral.gov/obesityprevention/pledges/parents.html.

2. "A Healthier You – Chapter 9. The Balancing Act: Food and Physical Activity." Web. www.health.gov/dietaryguidelines/dga2005/healthieryou/html/chapter9.html.

What kinds of activities count toward the Presidential Active Lifestyle Award? The program supports both traditional activities, such as walking, cycling, aerobics, and organized sports, as well as other activities like sledding, fishing, and dancing. For more ideas, there is a list on the website of almost 100 different activities in which you and others can participate. You can also visit the website of Up2Us, a national coalition of Sports-Based Youth Development organizations, at www.up2us.org or call **212.563.3031**. Also, the California Department of Education maintains an afterschool physical activity website with fun activity ideas: www.afterschoolpa.com.

Step-by-step guide

CHALLENGE!

Safe Routes to Walk and Bike in Your Communities: Ensure that children have safe routes to walk and bike through your communities.

Many communities have experienced a decline in walking and bicycling. 13% of children ages five to 14 walk or bike to school, down from 44% of students in 1969. Parents often cite safety issues as reasons for not allowing children to travel to school by foot or bicycle. However, children who walk or bike to school report being more physically active than those who travel by bus, car, or train.

What can my organization do to help ensure the safety of pedestrians and cyclists? There are a number of ways that community groups can be involved in the following activities:

ROUTE MAPPING

Identify a focused area surrounding schools and map the routes that children currently take to school. Walk the routes in groups and identify safety issues.

Involve the students and have them map the routes themselves. Those who walk and ride regularly are already familiar with their streets, whereas those who do not will begin to learn about their neighborhood.

Working with local government staff, develop an improvement plan for addressing safety issues such as speeding cars, dangerous intersections, and missing or ineffective crosswalks, sidewalks, and bike lanes. Check out the Safe Routes to School organizing manual for ideas:

www.saferoutesinfo.org/guide/steps.

ESCORT PROGRAMS

Recruit adult volunteers who can accompany children to school. Often called a walking school bus, the group stops at designated locations at prearranged times so other children can join. Consider getting seniors involved as volunteers by working with the Senior Corps to create a formal program:

www.seniorcorps.gov.

Encourage school districts to place crossing guards at particularly dangerous intersections.

Have volunteers act as monitors on the street in urban areas where crime is a major concern.

What are some ways that my organization can promote a safe routes program? It takes time to develop new approaches and change attitudes regarding transportation.

Be sure to reintroduce your program every year at the beginning of the school year by doing some of the following:

Notify families and parents about the program and its benefits.

Participate in International Walk to School Day held every October (for more information, visit www.walktoschool.org).

Inform your community about the work you are doing through press releases and newsletter articles.

Keep your school community up-to-date on the latest street improvements. Every new success builds increased support for the program.

Keep measuring your success through new surveys. The greatest satisfaction comes from seeing the increase in the number of children walking and biking to school and the reduction of cars entering the school grounds.

Use existing toolkits to start your own program. Many schools and communities have already started walk and bike to school programs. Look at existing toolkits and see what will work in your community. For more information, click on **“Program Tools”** at www.saferoutesinfo.org.

Let's Move! Science Facts:

A regular routine of at least 30 to 45 minutes of fast walking, bicycling, or working around the house or yard will reduce the risk of coronary heart disease, hypertension, colon cancer, and diabetes!¹

Studies show a link between screen time and obesity, so set limits on your child's TV-watching, gaming, and Web surfing. Experts recommend no more than two hours per day.²

1. U.S. Department of Health and Human Services, Centers for Disease Control and Prevention. "Notice to Readers: Publication of Surgeon General's Report On Physical Activity and Health," Morbidity and Mortality Weekly Report, 45(27), 591-592, July 12, 1996. www.cdc.gov/mmwr/preview/mmwrhtml/00042984.htm.

2. "Reduce Screen Time." We Can! National Heart Lung and Blood Institute. Web. www.nhlbi.nih.gov/health/public/heart/obesity/wecan/reduce-screen-time/index.htm.

**Affordable and
Accessible Food**

Affordable and Accessible Food

More than 23 million Americans, including six-and-a-half million children, live in low-income urban and rural neighborhoods that are more than one mile from the closest supermarket. These communities, where access to affordable, quality, and nutritious foods is limited, are known as “food deserts.” In these communities, people either don’t have regular access to grocery stores that sell healthy foods such as fresh fruit and vegetables, or if they do, these items are too expensive.

Lack of access to proper nutrition is one reason many people, including children, do not get recommended daily levels of fruits, vegetables, and whole grains. Food insecurity and hunger among our children is even more widespread. **Let’s Move!** to ensure that all families have access to healthy, affordable food in their communities.

In our effort to end obesity in children and adolescents, it is important that we focus on increasing access to healthy and affordable foods. Here are some ways that faith-based and neighborhood organizations can play an important role in providing access to affordable and healthy food options:

- **Organize a Food Pantry:** Partner with your local food bank to host a food pantry with healthy food options at your organization or congregation. Visit Feeding America at www.feedingamerica.org/foodbank-results.aspx to find the food bank closest to you or call **1.800.771.2303**.
- **Host a Farmers Market:** Host a local farmers market at your place of worship or organization, and advocate for vendors to accept Supplemental Nutrition Assistance Program (SNAP) benefits. For information on SNAP benefits, visit www.fns.usda.gov/snap or call the **SNAP Hotline** at **1.800.221.5689**.
- **Supplemental Nutrition Assistance Program:** Help people in your congregation or community sign up for the Supplemental Nutrition Assistance Program (SNAP) that provides more purchasing power at the grocery store (*see the step-by-step guide on page 40 for information on how to get started*).
- **Women, Infants and Children (WIC):** Promote participation in the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) in an outreach effort to pregnant women and new mothers. For information on WIC, please visit www.fns.usda.gov/wic or call **1.866.348.6479**.

CHALLENGE!

CHALLENGE!

- **Summer Food Service Program:** Your organization can help children in low-income areas get the nutrition they need to learn, play, and grow throughout the summer months when they are out of school. You can do this by participating as a sponsor or a feeding site that receives reimbursements for serving meals and snacks through the Summer Food Service Program (SFSP). For more information on this program, please visit www.summerfood.usda.gov or call **1.866.348.6479**.

CHALLENGE!

- **Start a Community Garden:** Donate land at your house of worship to community members without their own space to grow food or start a congregational garden. Create and cultivate vegetable gardens as healthy eating educational tools. Community gardening is also a great way for kids to get exercise and spend time outdoors (*see the step-by-step guide on page 41 for information on how to get started*).
- **Hold a Healthy Food Drive:** Start a local produce exchange table for your congregation or community organization, or hold a food drive and encourage donations of healthy food items. Teach others about preserving local food by organizing canning and preserving sessions at your congregation, organization, or in homes of members. The National Center for Home Food Preservation has detailed information on canning and preserving at www.uga.edu/nchfp.
- **Gleaning Program:** Encourage participation in a gleaning program that harvests and donates nutritious food left behind in fields because of the high cost of harvest and comparatively low market price. Gleaning can also take place at farmers markets, restaurants, and grocery stores. For an example of a gleaning program, please visit www.endhunger.org or call **1.800.333.4597**.
- **Start a CSA Club:** Partner with local farmers to start a Community Supported Agriculture (CSA) club at your organization or place of worship. Subsidize CSA shares for families with limited resources.

CHALLENGE!

Let's Move! Science Facts:

An NIH-funded study found that the addition of one supermarket to a community increased people's fruit and vegetable consumption by 32%.¹

In 2009, 17.2 million children did not get enough to eat; they had to cut the size of their meals, skip meals, or even go whole days without food at some time during the year.²

Step-by-step guide

Supplemental Nutrition Assistance Program (SNAP): Help people in your congregation or community sign up for SNAP. SNAP is the new name for the Federal Food Stamp Program. Your State may use a different name, but it is still the same program.

With SNAP benefits, low-income individuals and families can purchase healthier food, such as fruits and vegetables, whole grain foods, and dairy products. Food stamp benefits also bring Federal dollars to your community that can help the local economy.

What is SNAP? SNAP helps low-income people and families buy the food they need for good health. You can apply for benefits by completing a state application form at www.fns.usda.gov/snap or get more information by calling the **SNAP Hotline at 1.800.221.5689**. Benefits are provided on an electronic benefits card (known as an EBT card) that is used like an ATM card and accepted at most grocery stores.

How can my congregation help people apply for SNAP? Form an outreach group with the goal of helping eligible congregants sign up for SNAP. Train staff and volunteers at your congregation or organization with basic information about SNAP and how to apply. Have an information table before and after services where volunteers help eligible congregants apply for SNAP. Your local SNAP office can partner with you and help provide training and materials. To locate your local SNAP office, visit www.fns.usda.gov/snap/outreach/map.htm or call the **SNAP Hotline at 1.800.221.5689**.

How can we let people know about the program? Consider displaying SNAP posters, flyers, magnets, and other materials in your place of worship or organization. You can order these free materials from the U.S. Department

1. Williamson, David. "Nearness of Supermarkets Boosts People's Intake of Nutritious Fruits and Vegetables, Study Reveals," The University of North Carolina at Chapel Hill. Web. www.unc.edu/news/archives/nov02/wing110102.html.

2. "Food Security in the United States: Key Statistics and Graphics." Economic Research Service, United States Department of Agriculture. Web. www.ers.usda.gov/Briefing/FoodSecurity/stats_graphs.htm.

of Agriculture (USDA) at <http://snap.ntis.gov>. Put SNAP information in all bulletins, newsletters, and other print and electronic items shared with the congregation or community. If your organization manages a food pantry, include SNAP information with food that you distribute.

How can we support healthier food choices? Host a nutritious food tasting, cooking demonstration, or health fair at your place of worship. Give out recipe cards that also include information about SNAP. Check out the SNAP recipe finder for more ideas at <http://recipefinder.nal.usda.gov> or by calling **1.866.348.6479**.

Are SNAP materials available in Spanish? Yes! SNAP materials can be ordered or downloaded in Spanish from USDA at <http://snap.ntis.gov>.

Step-by-step guide

CHALLENGE!

Start a Community Garden

Get others involved! It is not a community garden without a COMMUNITY! Invite various groups, associations, and people in your congregation or community to help get the garden started. Involve young people (especially at-risk young people) as participants in the garden. Consider devoting a portion of the garden to cultivation by members of youth after school groups. Gardening is a great way for children and teens to get their daily physical exercise and spend time outdoors.

Find the land: Look for a vacant spot that gets plenty of sun (at least six hours a day), is located near a water source, and has good drainage. The site should have soil that is free of trash and debris. Once you find potential sites, visit your local tax assessor or local government office to find out who owns the land. Consider partnering with government agencies to provide land for a garden. The National Park Service, for example, allows groups to form community gardens in parks. Try consulting with other community gardens in the area to find out how they obtained their site and got started.

Work out the logistics: After finding the site, contact the land owner or government agency to:

- **Ask for permission** to put a community garden plot there;
- **Explain the benefit** of the garden to the community and the environment;
- **Test the soil:** Be sure to test the soil to ensure it is free of contaminants and safe for growing food. Your local land grant university will often offer this service for a small fee. To find the university closest to you, visit www.csrees.usda.gov/extension.
- **Sign a lease** that includes the terms of agreement for use of the site;
- **Include a “hold harmless” waiver** so that the land owner will not have to worry about injuries incurred at the site; and
- **Obtain a multi-year lease** to ensure the continuation of your garden to future seasons.

Each gardener should sign a gardener’s agreement that includes a hold harmless waiver and commits to upkeep of the plot and the garden throughout the year. Landowners can also obtain liability insurance as added protection.

Design the garden: When designing a garden, consider:

- **Individual plots** for participants can help ensure dedicated participation, or you could make the entire garden a shared space, where all gardeners work together throughout the season and share the harvest;
- **Plot size** should be narrow enough to access plantings from all sides without having to stand in the plot. Also consider if you can provide access to gardeners with disabilities via raised beds or wider paths.
- **Factors such as irrigation**, a tool shed for shared tools and supplies, and a fence around the perimeter if you anticipate problems with wildlife;

Additional Resources

The following section provides information on additional resources that are relevant to faith-based and neighborhood organizations interested in working on *Let's Move!*

Summary of grants for obesity programs and research from the National Institutes of Health
www.obesityresearch.nih.gov/funding/funding.htm

Summary of funding opportunities related to obesity from the U.S. Department of Health and Human Services' Rural Assistance Center
Click on "Obesity" at www.raconline.org/funding/funding_topic.php

Funding Opportunities from the U.S. Department of Agriculture (USDA)
www.csrees.usda.gov/fo/funding.cfm
www.usda.gov/knowyourfarmer

Summary of USDA Nutrition Assistance Programs:
www.fns.usda.gov

The following organizations and programs provide information and resources that can assist faith-based and neighborhood organizations in their efforts to address childhood obesity. These organizations include:

Robert Wood Johnson Foundation (RWJF) Center to Prevent Childhood Obesity

The RWJF Center to Prevent Childhood Obesity is a national organization dedicated to reversing the childhood obesity epidemic by changing public policies and creating healthier environments in schools and communities. The Center provides technical assistance to help communities achieve these goals and educate policymakers and advocates about which national, state, regional, and local policies are most effective in preventing childhood obesity. A host of technical assistance resources, including webinars, case studies, and toolkits, can be accessed via the Center website at www.reversechildhoodobesity.org.

In addition to providing technical assistance, the RWJF Center serves as a repository of information from a number of the organizations and programs listed below that address childhood obesity.

Active Living Research

Active Living Research contributes to the prevention of childhood obesity in low-income and high-risk racial and ethnic communities by supporting research to examine how environments and policies influence active living for children and their families. Active Living Research manages grants to help build the evidence base and has a resource center of literature citations and active living news. For more information, visit www.activelivingresearch.org.

African American Collaborative Obesity Research Network (AACORN)

The mission of AACORN is to improve the quality, quantity, and effective translation of research to address weight-related issues in African American communities. AACORN's interests include research about healthful eating and physical activity, prevention of weight gain, and weight loss and maintenance.

AACORN addresses these issues in the contexts of social and family interactions and other aspects of day-to-day life in African American communities. For more information and to access AACORN's community tools, visit www.aacorn.org.

Alliance for a Healthier Generation

The American Heart Association and the William J. Clinton Foundation joined forces in May of 2005 to create a healthier generation by addressing childhood obesity. The Alliance for a Healthier Generation works to positively affect the places that can make a difference to a child's health: homes, schools, restaurants, doctor's offices, and communities. For more information and to access the Alliance's print resources, visit www.healthiergeneration.org.

American Community Gardening Association

The mission of the American Community Gardening Association (ACGA) is to build community by increasing and enhancing community gardening and greening across the United States and Canada. ACGA is a bi-national nonprofit membership organization of professionals, volunteers, and supporters of community greening in urban and

rural communities. ACGA staff, board members, and volunteers answer thousands of requests for information each year about community gardening and greening. They offer support, coach fledgling groups, and promote networking and information sharing on all levels. For more information, visit www.communitygarden.org.

Bridging the Gap

Bridging the Gap is a research program with a goal to improve the understanding of how policies and environmental factors affect diet, physical activity, and obesity among youth. Bridging the Gap tracks trends and changes in these factors over time at the state, community, and school levels and disseminates findings to help advance solutions for reversing the childhood obesity epidemic. For more information, visit www.bridgingthegapresearch.org.

Communities Creating Healthy Environments (CCHE)

CCHE is a national capacity-building initiative to support diverse, community-based organizations and indigenous groups in developing and organizing for effective, culturally competent policy initiatives that address the root causes of childhood obesity at the local level. For more information, visit www.ccheonline.org.

Community Action Agencies (CAAs)

CAAs are nonprofit private and public organizations established under the Economic Opportunity Act of 1964 to fight America's War on Poverty. CAAs help people to help themselves in achieving self-sufficiency. Today, approximately 1,000 CAAs serve the poor in every state as well as Puerto Rico and the Trust Territories.

The service areas of CAAs cover 96% of the nation's counties. The CAAs are connected by a national network. Since each CAA is governed locally, each provides a different mix of programs and services. To learn more about CAAs and to find a nearby CAA, please visit www.communityactionpartnership.com.

Cooking Matters

A program of Share Our Strength, Cooking Matters brings together local culinary and nutrition professionals and others who volunteer their time to lead hands-on courses that give participants the know-how to select tasty and low-cost ingredients, stretch them across multiple meals, and use healthy cooking techniques and recipes that help provide the best nourishment possible to their families. For more information, visit www.cookingmatters.org.

Feeding America

Feeding America is the nation's leading domestic hunger-relief charity. Their mission is to feed America's hungry through a nationwide network of member food banks and engage the country in the fight to end hunger. Contact Feeding America if you are interested in setting up a food pantry in your community or starting a Backpack Program to help kids get food on weekends and during school vacations. For more information, visit www.feedingamerica.org.

The Food Trust

The Food Trust, a nonprofit founded in 1992, strives to make healthy food available to all. Working with neighborhoods, schools, grocers, farmers, and policymakers in more than a dozen states, the Food Trust promotes a comprehensive approach that combines nutrition education and greater availability of affordable, healthy food. The Food Trust is a partner in the Pennsylvania Fresh Food Financing Initiative. To find free resources on nutrition education, supermarket development, healthier corner stores, and other important food issues, please visit www.thefoodtrust.org.

Healthy Eating Active Living Convergence Partnership

In 2006, a collaboration of funders came together to create the Healthy Eating Active Living Convergence Partnership, with the shared goal of changing policies and environments to better achieve the vision of healthy people living in healthy places. The Convergence Partnership supports multi-field equity-focused efforts to create environments that support

healthy eating and active living. For more information and resources, visit www.convergencepartnership.org.

Healthy Eating Research

Healthy Eating Research supports research on environmental and policy strategies with strong potential to promote healthy eating among children to prevent childhood obesity, especially among low-income and racial and ethnic populations at highest risk for obesity. Healthy Eating Research issues calls for proposals on a variety of topics related to environmental and policy research and develops research briefs that address major issues in childhood obesity. For more information, visit www.healthyeatingresearch.org.

Healthy Kids, Healthy Communities

The primary goal of Healthy Kids, Healthy Communities is to implement healthy eating and active living policy- and environmental-change initiatives that can support healthier communities for children and families across the United States. Healthy Kids, Healthy Communities places special emphasis on reaching children who are at highest risk for

obesity on the basis of race and ethnicity, income, and/or geographic location. To get more information and to learn about how Healthy Kids, Healthy Communities supports local community leaders, visit www.healthykidshealthycommunities.org.

Kids Eat Right

Kids Eat Right is the branch of the American Dietetic Association devoted to providing healthy meals, cooking ideas, nutrition recommendations, and parenting strategies for feeding children of all ages. All the site's resources are produced and peer-reviewed by registered dietitians as approved recommendations in medical nutrition therapy. For more information, visit www.kidseatright.org.

Leadership for Healthy Communities

Leadership for Healthy Communities supports local and state government leaders nationwide in their efforts to reduce childhood obesity through public policies that promote active living, healthy eating, and access to healthy foods. The program targets 15 priority states: Alabama, Arizona, Arkansas, Florida, Georgia, Kentucky,

Louisiana, Mississippi, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and West Virginia. For more information, visit www.leadershipforhealthycommunities.org.

National Collaborative on Childhood Obesity Research (NCCOR)

NCCOR brings together four of the nation's leading research funders – the Centers for Disease Control and Prevention, the National Institutes of Health, the Robert Wood Johnson Foundation, and the United States Department of Agriculture – to address the problem of childhood obesity in America. NCCOR focuses on efforts that have the potential to benefit children, teens and their families, and the communities in which they live: www.nccor.org.

National Heart, Lung, and Blood Institute (NHLBI): With Every Heartbeat is Life

NHLBI has created *With Every Heartbeat is Life* for the African American community. *With Every Heartbeat is Life* is a comprehensive, culturally appropriate 12 session lesson plan on heart-health

education. The curriculum is filled with hands-on demonstrations for health educators, skill-building activities, and handouts that can be copied. Community health workers can use this tool in community-based settings, including churches and health fairs, to increase knowledge of heart disease risk factors and promote health behaviors that prevent and control these heart disease risk factors. To learn more about ordering *With Every Heartbeat is Life* materials, visit www.nhlbi.nih.gov/health/healthdisp/aa.htm.

National Hunger Clearinghouse (NHC)

The NHC collects and distributes information about community-based resources and government programs that address the immediate and long-term needs of struggling families and individuals. Funded by the U.S. Department of Agriculture and managed by WhyHunger, the NHC operates the National Hunger Hotline (**1.866.3.HUNGRY**), which receives calls from individuals and organizations in need of information and resources. According to the particular needs of the

caller, the Hotline provides referrals to emergency food providers, government programs and benefits, and community-based organizations. For more information, please visit www.whyhunger.org.

National Initiative for Children's Healthcare Quality (NICHQ)

Led by experienced pediatric health care professionals, NICHQ's mission is to improve children's health by improving the systems responsible for the delivery of children's health care. NICHQ's current initiatives focus on ensuring that every child receives care in a high-performing medical home, including the prevention and treatment of childhood obesity; improving care systems for children with special health care needs; and improving perinatal care. NICHQ works with providers, funders, payers, policymakers, patients, and families to change care. NICHQ offers expert training, consulting support, educational materials, and data to entities working toward improving perinatal care and addressing childhood obesity. For more information, visit www.nichq.org.

National Institutes of Health: Ways to Enhance Children's Activity and Nutrition (We Can!)

The **Ways to Enhance Children's Activity and Nutrition (We Can!)** program, a collaboration between a number of institutes at the National Institutes of Health, is a national movement designed to give parents, caregivers, and entire communities a way to help children eight to 13 years old stay at a healthy weight. Visit **We Can!** at www.nhlbi.nih.gov/health/public/heart/obesity/wecan/index.htm.

National Policy and Legal Analysis Network to Prevent Childhood Obesity (NPLAN)

NPLAN provides leaders in the childhood obesity prevention field with focused legal research, model policies, fact sheets, toolkits, training, and technical assistance to explain legal issues related to public health. For more information and resources, visit www.nplanonline.org.

New Jersey YMCA State Alliance

The New Jersey YMCA State Alliance is an association made up of 44 YMCA from the State of New Jersey. Among its goals is to develop and implement strategic statewide programs that will have a positive impact on solving critical needs and issues in New Jersey, to provide a unified voice to address public policy issues, and to fulfill its mission to build strong kids, strong families, and strong communities. One such initiative is the New Jersey Partnership for Healthy Kids, in which the New Jersey YMCA State Alliance has partnered with the Robert Wood Johnson Foundation, local universities, local health departments, and other nonprofit organizations to reduce childhood obesity by 2015. For more information, visit www.njymca.org.

PolicyLink

PolicyLink is a national research and action institute advancing economic and social equity by Lifting Up What Works®. Founded in 1999, PolicyLink connects the work of local residents to the creation of sustainable communities of opportunity that allow everyone to participate and prosper. Such communities offer access to healthy food and physical activity,

quality jobs, affordable housing, good schools, and transportation. PolicyLink shares its findings and analysis through its publications, website, and online tools and in briefings with national and local policymakers. For more information on PolicyLink, please visit

www.policylink.org. Highlighted below are two recent reports from PolicyLink that relate to **Let's Move!**

Healthy Food, Healthy Communities: Promising Strategies to Improve Access to Fresh, Healthy Food and Transform Communities provides information about ways that communities across the country have succeeded in improving access to healthy food. To access the report, visit www.policylink.org/publications/healthyfoodhealthycommunities.

Grocery Store Attraction Strategies: A Resource Guide for Community Activists and Local Governments focuses on strategies for attracting grocery stores to underserved low-income communities. To access the report, visit www.policylink.org/publications/grocerystoreattractionstrategies.

The Reinvestment Fund (TRF)

TRF is an innovator in the financing of neighborhood and economic revitalization. Central to its mission is a commitment to put capital and private initiative to work for the public good. TRF provides financing for supermarkets or other grocery stores that plan to operate in underserved communities, where infrastructure costs and credit needs cannot be solely filled by conventional financial institutions. By improving the food landscape of underserved communities, TRF works to provide families with increased access to affordable healthy food. To learn more, please visit: www.trfund.com.

Safe Routes to School National Partnership

The Safe Routes to School National Partnership is a network of hundreds of organizations, government agencies, and professional groups working to set goals, share best practices, secure funding, and provide educational materials to agencies that implement Safe Routes to School programs. The mission is to advocate for and promote the practice of safe bicycling and walking to and from schools

throughout the United States. The mission is to advocate for and promote the practice of safe bicycling and walking to and from schools throughout the United States. The project brings together stakeholders from diverse fields to work with State Departments of Transportation to increase physical activity in students, to make the best use of available Federal funds, and to remove policy barriers to walking and bicycling to schools. For more information and resources, visit www.saferoutespartnership.org.

Salud America! The RWJF Research Network to Prevent Obesity Among Latino Children

Salud America! The RWJF Research Network to Prevent Obesity Among Latino Children is a national network of researchers, community leaders, policymakers, and other stakeholders who are working together to increase the number of Latino scientists seeking environmental and policy solutions to address Latino childhood obesity. For more information, visit www.salud-america.org.

Save the Children: Campaign for Healthy Kids

Save the Children works to change the lives of children in need in the United States and around the world. Save the Children works in impoverished rural communities in Appalachia and across America to provide early childhood development, literacy, physical activity, and nutrition programming as well as emergency relief. To learn more, visit www.campaignforhealthykids.org.

United States Breastfeeding Committee (USBC)

USBC is a coalition of national organizations dedicated to supporting breastfeeding in the United States. Its mission is to improve the nation's health by working collaboratively to protect, promote and support breastfeeding. Members include nonprofit organizations, professional associations, and governmental agencies. The USBC strategic plan includes goals to improve the integration of breastfeeding services in health care, to support women in the workforce, and to address marketing of infant formula. For more information, please visit www.usbreastfeeding.org.

Yale University Rudd Center for Food Policy and Obesity

The Rudd Center for Food Policy and Obesity seeks to improve the world's diet, prevent obesity, and reduce weight stigma by establishing creative connections between science and public policy, developing targeted research, encouraging frank dialogue among key constituents, and expressing a dedicated commitment to real change. The Rudd Center assesses, critiques, and strives to improve practices and policies related to nutrition and obesity to inform and empower the public; to promote objective, science-based approaches to policy; and to maximize the impact on public health. The Rudd Center is dedicated to assessing and disseminating information about effective community and school interventions that address nutrition and obesity. For more information and resources, visit www.yaleruddcenter.org.

YMCA of the USA (Y-USA): Pioneering Healthy Communities

Y-USA's Activate America® Healthier Communities Initiatives are helping more than 100 YMCAs and their communities take the action needed to increase opportunities for physical activity and healthy eating. Y-USA's Healthier Communities Initiatives focus on collaborative engagement with community leaders, how environments influence health and well-being, and the role policy plays in sustaining change. In addition, these initiatives empower local communities with proven strategies and models to create and sustain positive, lasting change for healthy living. Participating communities represent a variety of sizes (urban, rural, and suburban), hard-to-reach populations (low-income, underserved, and racial and ethnic), and geographic diversity and committed leadership at the community level, including strong YMCA leadership and presence. To learn more, please visit www.ymca.net/healthier-communities.

Building Networks and Partnerships

It will take all parts of our communities working together to help end the childhood obesity epidemic. The following section provides some tips to consider for building networks to implement these activities, as well as partnerships with the foundation or business community to support those activities.

Strategies for Mobilizing Your Community

Consider the following steps from the Communities That Care guide:

1. Build a community action plan around **Let's Move!** that includes shared goals, timelines, and assignments.
2. Involve everyone in the community to most effectively use all available resources to achieve your goals.

3. To ensure that the action plan continues to move forward, identify a leader who is willing to be responsible for the achievement of the community action plan's goals.
4. Collect data to monitor progress toward achieving the community's goals.
5. Focus on teamwork to accomplish goals: give everyone a part to play and make them feel involved and engaged.

Ideas for Leveraging Public-Private Partnerships

There may be specific opportunities to collaborate with the private and foundation sector (e.g., the business community and foundations) to address obesity and hunger among children in your community. The kinds of initiatives that result from collaboration and mutual support between nonprofits and congregations and the philanthropic and business sector are often called public-private partnerships. The following are a few steps that can be taken in the process of exploring how these partnerships can support your efforts:

1. In light of your community, define and establish your mission and goals.
2. Define your assets and needs, and then determine what type of partnership with a private entity would best forward your goals.
3. Leverage the skills of a private partner to develop a marketing plan for your organization and present the plan to your corporate partner.
4. Identify several methods of funding other than the private partner and create grant proposals.
5. Plan to communicate regularly with partners and identify a partnership manager who can communicate with both private and public institutions.

Consider taking the following steps to explore how these partnerships can support your efforts:

1. Build a record of success through consistent, effective programs to gain support.
2. Define the goals and objectives of the initiative and develop a realistic strategy toward attaining them. Make sure there is a system to maintain accountability.
3. Stress strengths of your organization and highlight needs that can be fulfilled through partnerships.
4. Establish good personal relationships in order to increase the ability to anticipate and resolve problems.

For more information about how to support public-private partnerships, see “Maximizing Program Services Through Private Sector Partnerships and Relationships: A Guide for Faith- and Community-Based Service Providers,” which can be found at www.samhsa.gov/fbci/fbci_pubs.aspx.
